FOREWORD

The Department of Water Resources as Watermaster for the Upper Los Angeles River Area (ULARA) is pleased to submit this report of water supply conditions in ULARA during the 1974-75 water year. It was prepared in accordance with the provisions of the original Los Angeles County Superior Court Judgment dated March 14, 1968 and does not reflect the May 12, 1975 decision of the State Supreme Court. The original Judgment, together with Part 4, Division 2, of the California Water Code, authorized this publication and the Department's administration of the Watermaster Service Area.

The effect the May 12 decision of the State Supreme Court will have on Watermaster Service in ULARA has not been determined. In order to maintain continuity in operation, the Watermaster will maintain records as in the past until new procedures are developed. This is in accordance with the wish of the ULARA Advisory Board.

This report includes information on ground water extractions, use of imported water, recharge operations, water quality conditions, a financial report on Watermaster Service during the 1974-75 fiscal year, and the tentative budget of the Watermaster for the 1976-77 fiscal year.

A Subcommittee on Cyclic Storage was formed by the Advisory Board during 1973-74. Together with the Department of Water Resources, The Metropolitan Water District of Southern California (MWD), and the Los Angeles County Flood Control District (LACFCD), the Subcommittee is studying the feasibility of using the San Fernando Basin for storing water from the State Water Project. This report includes a statement on the progress of this study.

The Watermaster wishes to acknowledge and express his appreciation for the assistance and support received from the many public and private organizations and individuals whose contributions were essential to this report.

Jack J. Coe, Chief
Southern District
and Watermaster
Reg. C. E. No. 8075

TABLE OF CONTENTS

PLATES

TABLES

I. INTRODUCTION

Upper Los Angeles River Area (ULARA) encompasses all of the watershed of the Los Angeles River and its tributaries above a point in the River designated as Los Angeles County Flood Control District (LACFCD) Gaging Station F-57C, northwesterly of the junction of the surface channels of the Los Angeles River and the Arroyo Seco (Plate 1). The entire area consists of 330,000 acres, comprising 123,000 acres of valley fill, referred to as the ground water basins, and 207,000 acres of hills and mountains. ULARA is bounded on the north by the Santa Susana Mountains and on the east by the San Rafael Hills which separate it from the San Gabriel Basin. To the south, the Santa Monica Mountains separate it from the Los Angeles Basin and to the west, lie the Simi Hills.

ULARA, as defined in the Judgment, has four distinct hydrologic ground water basins. The water supplies of these basins are separate and independent and are replenished by deep percolation from rainfall and from a portion of the water that is delivered for use within these basins and which returns to the ground water body. The four ground water basins in ULARA are the San Fernando, Sylmar, Verdugo, and Eagle Rock Basins (Plate 1).

The San Fernando Basin, the largest of the four basins, consists of 112,000 acres and comprises 90.8 percent of the total valley fill. It is bounded on the east and northeast by the San Rafael Hills and Verdugo Mountains; on the south by the Santa Monica Mountains; and on the northwest and west by the Santa Susana Mountains and Simi Hills.

The Sylmar Basin, in the northerly part of ULARA, consists of 5,600 acres and comprises 4.5 percent of the total valley fill. It is bounded on the north and east by the San Gabriel Mountains; to the south it is divided by the eroded limb of the Little Tujunga syncline; and the topographic divide in the valley fill, lying between the Mission Hills and San Gabriel Mountains, divides it on the west.

The Verdugo Basin, north and east of the Verdugo Mountains in ULARA, consists of 4,400 acres and comprises 3.8 percent of the total valley fill. It is bounded on the north by the San Gabriel Mountains; on the east by the ground water divide between the Monk Hill Subarea of the Raymond Basin and the Verdugo Basin; on the southeast by the San Rafael Mountains; and on the south and southwest by Verdugo Mountains.

The Eagle Rock Basin, the smallest of the four basins, is in the extreme southeast corner of ULARA. It comprises 800 acres and consists of 0.6 percent of the total valley fill.

istory of Adjudication

ULARA was established by the JUDGMENT AFTER TRIAL BY COURT in Superior Court Case No. 650,079, entitled The City of Los Angeles, A Municipal Corporation, Plaintiff, vs. City of San Fernando, et al., Defendants signed March 14, 1968 by the Honorable Edmund M. Moor, Judge of the Superior Court. Prior to the Judgment, numerous pretrials were held, subsequent to the filing of the action by the City of Los Angeles in 1955 and before the trial commenced on March 1, 1966.

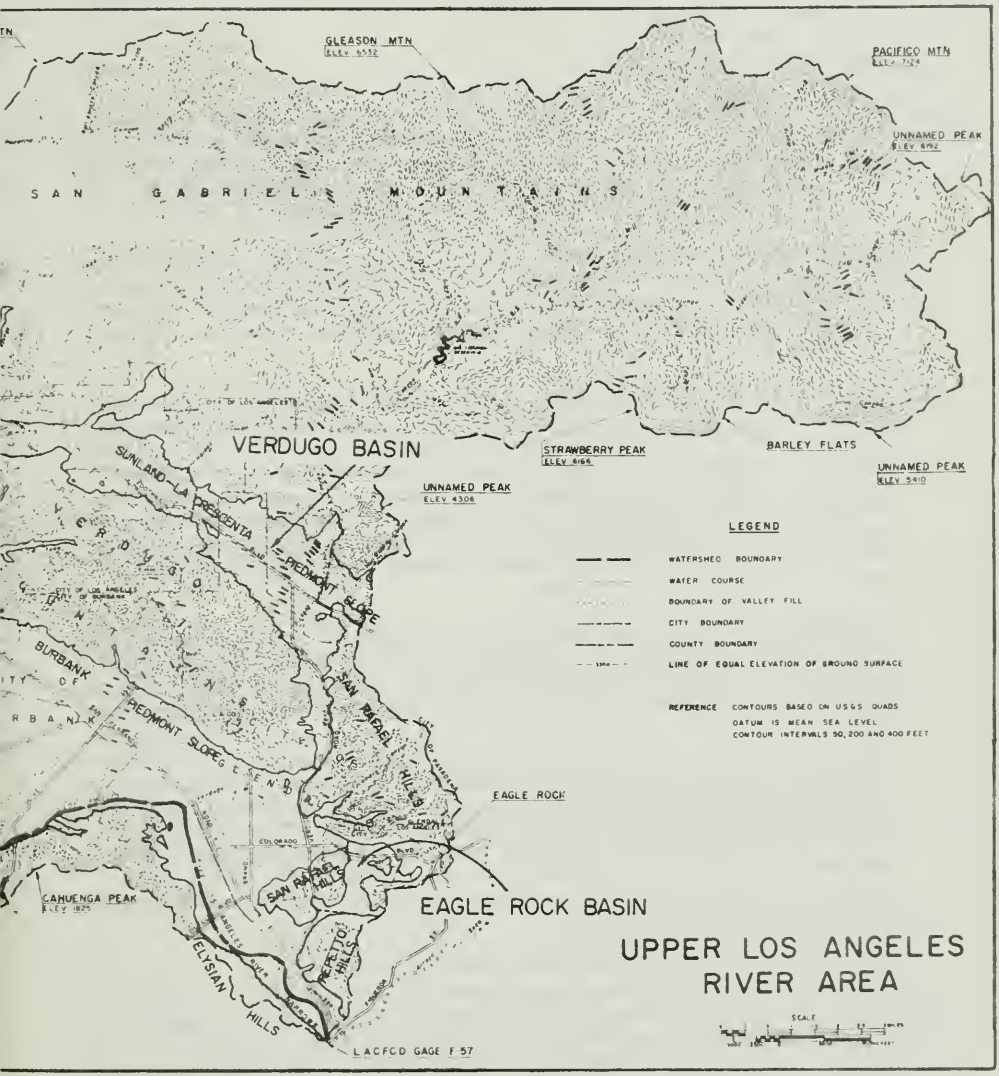
PLATE 1



UPPER LOS ANGELES RIVER AREA

On March 19, 1958, an Interim Order of Reference was entered by the Court directing the State Water Rights Board, now known as the State Water Resources Control Board (SWRCB), to study the availability of all public and private records, documents, reports and data relating to a proposed order of reference in the case. The Court subsequently entered on June 11, 1958, an "Order of Reference to State Water Rights Board to Investigate and Report upon the Physical Facts (Section 2001, Water Code)".

A final Report of Referee was approved on July 27, 1962, and filed with the Court. The Report of Referee made a complete study of the geology, insofar as it affects the occurrence and movement of ground water, and the surface and ground water hydrology of the area. In addition, investigations were made of: the history of the horizontal and vertical location of the beds, banks and channels of the Los Angeles River and its tributaries; the areas, limits, and directions of flow of all ground water within the area; the quality of the ground water in the basins; all sources of water, whether they be diverted, extracted, or imported, etc. This was the basis for the Judgment.

The City of Los Angeles filed an appeal with the Court of Appeals which held a hearing on November 9, 1972, and issued its opinion on November 22, 1972. The opinion, prepared by Judge Compton and concurred by Judges Roth and Fleming, reversed, with direction, the original Judgment handed down by Judge Moor. In essence, the City of Los Angeles was given rights to all water within ULARA including the use of the underground basins. The defendants, however, were given the right to capture "return water", which is purchased MWD water that percolates into the basin.

A petition for rehearing was filed on December 7, 1972, but was denied by the Court of Appeals. On January 2, 1973, the defendants appealed to the State Supreme Court. The Court on March 2, 1973, advised the parties it would hear the case. The hearing was held on January 14, 1975.

On May 12, 1975, the California Supreme Court issued its decision on the 20-year San Fernando Valley Water Litigation. This decision, which became final on August 1, 1975, upheld the Pueblo Water Rights of the City of Los Angeles to all ground water in the San Fernando Basin derived from precipitation within ULARA. The City of Los Angeles' Pueblo Water Rights were not allowed to extend to the ground waters of Sylmar and Verdugo Basins.

The City of Los Angeles was also given rights to all San Fernando Basin ground water derived from water imported by it from outside ULARA and either spread or delivered within ULARA. The Cities of Glendale and Burbank each were given rights to all San Fernando Basin ground water derived from water that such city imports from outside ULARA and delivered within ULARA.

Presently, the Cities of Los Angeles, Glendale and Burbank are negotiating a stipulated agreement regarding the physical solutions and the pumping rights within the San Fernando Basin. It has been agreed that the extractions from and importation to the San Fernando Basin by each party in the period from October 1, 1975, to the effective date

of the Stipulated Injunction now being discussed, shall be charged or credited as the case may be to that party's entitlement for the current water year as finally determined in such injunction. The Watermaster (DWR) will continue to maintain records until the Watermaster's role has been defined.

termaster Service

Watermaster Service is administered by the Department of Water Resources (DWR) under Article 2, Chapter 2.5, Division 1 and Part 4, Division 2, of the California Water Code. Section 4025 authorizes DWR to form Watermaster Service Areas. Pursuant to Section 4026, such areas are created from time to time as rights to water are ascertained and determined. Particularly where ground water is concerned, such rights are usually ascertained or determined by court decree.

The first Watermaster Service Area was formed in September 1929 and the latest (ULARA) was formed on April 19, 1968. Currently, there are 20 such areas controlling surface water diversions in northern California and 4 controlling ground water use in southern California.

Under the original Judgment, the Court appointed DWR as Watermaster to keep the Court fully advised in the premises, and to assist the Court in the administration and enforcement of the provisions of the Judgment.

The effect the May 12 decision of the State Supreme Court will have on Watermaster Service in ULARA has not been determined. In order to maintain continuity in operation, Watermaster Service will be administered as in the past until new procedures are developed. This is in accordance with the wish of the ULARA Advisory Board.

A major task of the Watermaster in ULARA is that of monitoring ground water extractions. In accordance with the "General Information Policies and Procedures" of January 4, 1971, adopted by the Advisory Board, every ground water pumper reports his ground water extractions on a monthly basis on preprinted forms prepared and supplied by the Watermaster. This makes possible the updating of the water rights accounts (Watermaster Water Production Summary) by computing the amount pumped during the previous month, the total amount pumped to date, and the amount that can be legally pumped during the remainder of the water year. A copy of the updated account is then mailed to the pumper each month.

The Watermaster's field staff performs water-meter tests to verify ground water production reported by the parties when requested by any party to the Judgment or at the discretion of the Watermaster.

Defective or inaccurate water measuring devices must be repaired within 30 days after receiving written notice of the results of the test from the Watermaster. A number of well site investigations were made during 1974-75, and three meter tests were performed.

The Watermaster keeps the Court apprised of hydrologic conditions within ULARA by means of annual reports and on special occasions by correspondence directed to the Court, both of which are reviewed by the Advisory Board before submittal. In preparing the annual report, the Watermaster collects and reports all information affecting and

relating to the water supply and disposal within ULARA. Such information includes the following items:

1. Water Supply

    a. Precipitation
    b. Imported water

2. Water use and disposal

    a. Extractions

        (1) Used in valley fill area
        (2) Exported from each basin

    b. Water outflow

        (1) Surface
        (2) Subsurface
        (3) Sewers

3. Water levels

4. Transfers of water rights

5. Watermaster administrative budgets and costs

6. Compliance and violation by any party in terms of the Judgment

7. Ownership and locations of new wells

In addition to the above duties, the Watermaster also makes recommendations as he deems appropriate in connection with the proper utilization of the water supply in the underground storage capacities of ULARA.

Advisory Board

Section X, Paragraph 5 of the ULARA Judgment established an Advisory Board for the purpose of advising the Watermaster in the administration of his duties. The duly appointed members of the Board, as of September 30, 1975, are:

City of Los Angeles

Duane L. Georgeson
Wells O. Abbott, Jr. (Alternate)
Bruce W. Kuebler
Melvin L. Blevins, Secretary (Alternate)

City of Glendale

William H. Fell
Steven J. Meyerhofer (Alternate)

City of Burbank

Warren D. Hinchee
Martindale Kile, Jr. (Alternate)

City of San Fernando

Robert James, Chairman
Stuart E. Bergman (Alternate)

Crescenta Valley County Water District

Robert K. Argenio (Alternate)

The Advisory Board may be convened by the Watermaster at any time in order to seek its advice. In addition, the Advisory Board is responsible for reviewing with the Watermaster the proposed annual budget and annual report.

During the 1974-75 water year, the Advisory Board was convened on February 10, 1975.

The meeting of February 10th was convened to discuss the following items:

1. Annual Report for 1973-74.

2. Budget for 1975-76.

3. DWR's 1973 Land Use Survey.

4. Conjunctive Use of Ground Water Storage in San Fernando Basin.

5. Water Quality Report for ULARA.

6. Status of Reclaimed Water in ULARA.

In addition to the Advisory Board meeting, the Cyclic Storage Committee met four times to discuss the current study regarding storage of State Water project water (see page).

ummary of 1974-75 Operating Conditions

Rainfall in the valley fill area was 90% of normal and was 6 percent less than the year before. With the exception of 1972-73, the last six years have experienced below normal rainfall. Runoff decreased by 23 percent, reducing by 7 percent the amount of water conserved by LACFCD in its spreading basins.

Overall, extractions increased by 6 percent and were above the combined Restricted Rights of the three basins. Ground water extractions in Sylmar and Verdugo Basins did not exceed the Restricted Rights therein. Imports were down by 1 percent (4,200 acre-feet), and exports decreased by 2 percent (5,200 acre-feet).

Water levels at key wells reflect a slight drop and stabilization of levels throughout most of the Basin. Levels have dropped since the early 1940's from 0-10 feet in Canoga Park to 140 to 160 feet in the area between Cities of Glendale and Burbank. Levels have not changed as drastically at the Narrows and Verdugo Basin. Sylmar Basin levels have dropped by 50-60 feet since the early 1940's.

Water quality in the Basins ranges from good to excellent. Recent data show that quality changes appear to have stabilized in the eastern portion of the San Fernando Basin and slowed in the western. This does not apply to Verdugo and Sylmar Basins and the L.A. Narrows.

Eleven parties exceeded their Restricted Pumping rights in 1974-75. Six of the eleven parties were in violation as a result of having a zero water right or having a deficit carryover from 1973-74. The Watermaster approved overextractions and carryover in excess of permissible limits in three cases after having received the Advisory Board's concurrence.

The Watermaster processed nine assignments of water rights in ULARA. Expenditures for Watermaster Service increased by less than 2 percent and amounted to $0.23 per acre-feet of ground water extracted.

Table 1 compares statistics for this period of record and the prior water year.

TABLE 1. SUMMARY OF OPERATING CONDITIONS

Item	Water Year 1973-74	Water Year 1974-75
Parties	27	26
Active pumpers	20	19
Active nonparties (within valley fill)	3	3
Restricted Pumping, in acre-feet	104,040	104,040
Watermaster expenses (fiscal year)	$25,678.28	$26,113.52
Watermaster expenses per acre-foot pumped	$ 0.24	$ 0.23
Valley rainfall, in inches	15.75	14.74
Spreading Operations, in acre-feet		
LACFCD	10,283	9,495
Los Angeles, City of	6,205	13,291
Extractions, in acre-feet	105,208	111,966
Imports, in acre-feet		
Colorado River water	6,606	4,590
Owens River water	446,059[a]	440,810
Northern California water	22,884	25,929
Delivered to hill and mountain areas, in acre-feet	49,582[a]	50,566
Exports, in acre-feet		
Owens River water	232,204[a]	227,048
Sewage	110,173	113,037

a/ Last year's figure was updated.

II. WATER SUPPLY CONDITIONS

ULARA depends on many water sources to meet demand brought by rapid growth of industry and population. At present, the water supply of ULARA consists of: precipitation on the watershed which includes portions of the San Gabriel, Verdugo, Santa Monica, and Santa Susana Mountains; ground water that is in storage in the four basins; imports from the Mono Basin-Owens River system; imports from the Colorado River; and water from northern California made available by the State Water Project.

recipitation

ULARA has the climate of an interior coastal valley and is hotter in the summer and wetter in the winter than the coastal areas which have a Mediterranean type climate.

Precipitation varies considerably throughout ULARA, depending on topography and elevation. Mean seasonal precipitation ranges from about 14 inches at the western end of the San Fernando Valley to 35 inches in the San Gabriel Mountains. Approximately 80 percent of the annual rainfall occurs from December through March.

Precipitation in the valley and in the hills and mountains is evaluated separately. The valley is made up of the four ground water basins, whereas the hills and mountains comprise the remaining areas in ULARA. Precipitation in the hills and mountains is evaluated to relate the runoff from the watersheds of Big Tujunga, Pacoima Creek, and Sycamore Canyon, to the runoff records which are included in this report and also to evaluate the ground water recharge. (See Plate 2 for location of precipitation stations.)

The 1974-75 water year experienced below average rainfall. Rainfall in ULARA decreased to 16.98 inches, a drop of 1 inch from last year. On the average, about 14.74 inches of rain fell on the valley floor, whereas the mountains received approximately 19.14 inches. The 90-year (1881-1971) average precipitation for the valley and mountains is 16.45 and 21.35 inches, respectively.

Table 2 presents a record of rainfall at 22 key precipitation stations which were used to develop the 90-year average rainfall and are described in the Report of Referee.

TABLE 2. PRECIPITATION [a/]

Runoff and Outflow from ULARA

The drainage area of ULARA contains 329,137 acres, of which 205,709 acres are hills and mountains. The drainage system, in turn, is made up of the Los Angeles River and its tributaries. Surface flow in spring originates as: storm runoff from the hills and mountains; storm runoff from the impervious areas of the valley; operational spills of imported water; industrial and sanitary waste discharges; and rising water.

Urbanization of the area has rapidly increased the flow discharge rates in much of ULARA and it is important to keep abreast of such change and its effect on the ground water basins.

A number of stream-gaging stations are maintained throughout ULARA, either by LACFCD or U. S. Geological Survey (USGS). The Watermaster has selected six key gaging stations which, in effect, record major runoff from hydrologic areas in ULARA.

Table 3 summarizes the monthly flows for each gaging station and compares the 1973-74 water year with the 1974-75 year. The decrease in runoff reflects the decrease in rainfall in both the mountain and valley areas.

TABLE 3. MONTHLY RUNOFF AT SELECTED GAGING STATIONS [a/]

a/ Figures shown are rounded off; for details see Appendix C.

The records presented herein will keep the parties informed as to the magnitude of runoff from these various areas. The stations selected for this purpose are:

Station 57C registers all surface outflow from ULARA.

Station 118B registers all releases from Pacoima Dam that originate in Pacoima Canyon. Runoff below this point flows to the Lopez and Pacoima spreading grounds and on down to the Los Angeles River.

Station 168 registers all releases from Big Tujunga Dam, which collects runoff from Tujunga Canyon northeasterly of the Dam. Runoff below this point flows to Hansen Dam.

Station 252 registers flow from Verdugo Canyon plus flows from Dunsmore and Pickens Canyons.

Station E-285 registers flow from the westerly slopes of Verdugo Mountains and some flow east of Lankershim Boulevard. It also records any releases of reclaimed waste water discharged by the City of Burbank.

Station 300 registers all flow west of Lankershim Boulevard plus outflow from Hansen Dam that is not spread. These records also include releases from Sepulveda Dam, which may include extractions from Reseda Wells.

The locations of these key gaging stations are shown on Plate 2. The mean daily discharge rates for these six gaging stations during 1974-75 are summarized in Appendix C.

At the request of the Advisory Board, the Watermaster has attempted to compute the surface flow of the Los Angeles River at gaging station F-57C as to the sources, i.e., storm runoff from precipitation, Owens River water, rising water, or industrial and reclaimed waste water discharges. The Watermaster utilized the procedures outlined in the Report of Referee for estimating the approximate flow rates and sources of water passing gaging station F-57C. A similar request was made for station F-252. A summary of the procedures used follows and a tabulation of the computed flows is shown in Table 4.

TABLE 4. SEPARATION OF SURFACE FLOW AT STATIONS F-57C AND F-252
(in acre-feet)

Period	Base low flow		Surface Runoff		Total Measured Outflow
	Rising Water	Waste Discharge	Owens River	Net Storm

1973-74	1,772	0	0	5,613	7,385
1974-75	1,333	0	0	4,255	5,588

a/ May include rising water past rubber dam at Headworks Spreading grounds, Verdugo Channel, and L. A. River Narrows

The base low flows were separated from the surface runoff by the use of the hydrographs of Station F-57C. Base flows consist of rising water and industrial waste plus sewage. The separation of these two components is based on the following assumptions:

Rising water equals base low flow minus the sum of industrial waste and sewage. Industrial wastes are estimated from City of Los Angeles waste permits and the low flows in the Burbank-Western storm drain.

When the City of Los Angeles diverts water at the Headworks, all the rising water is diverted. When there is no diversion, all the rising water percolates upstream from Station F-57C.

The surface runoff obtained from the hydrographs of Station F-57C consists of net storm runoff and Owens River water. The separation of surface runoff into these two components is based on the following assumptions:

Net storm runoff equals surface runoff minus Owens River water.

If the Headworks divert, all releases of Owens River waters are diverted to the Headworks spreading grounds. If the Headworks does not divert, all releases of Owens River waters are considered as passing station F-57C.

Ground Water Recharge

Local precipitation can have a marked influence on the ground water supply and water in storage. However, there is a wide variation in the annual amount of runoff as a result of changes in both precipitation and retentive characteristics of the watershed.

The accelerated urban development in ULARA has resulted in much of the rainfall being collected and routed into paved channels which discharge into the Los Angeles River and subsequently is carried out of the Basin. Plate 2 depicts the lined channels in ULARA.

To somewhat overcome the rapid outflow due to urbanization, Pacoima and Hansen Dams, originally built for flood protection, are currently being utilized to regulate storm flows to recapture the flow in spreading basins operated by LACFCD as well as the City of Los Angeles.

LACFCD operates the Branford, Hansen, Lopez, and Pacoima spreading grounds. The City of Los Angeles, in turn, operates the Tujunga and Headworks spreading grounds. Plate 2 shows the location of these spreading basins. The spreading grounds operated by LACFCD are utilized for spreading native water, whereas the spreading grounds operated by the City of Los Angeles are utilized to spread Owens River and native water, spillage from the Chatsworth Reservoir, ground water effluent, and the discharge from the Reseda wells. Table 5 summarizes the spreading operations for the 1974-75 water year.

TABLE 5. SPREADING OPERATIONS
(in acre-feet)

a/ Includes industrial discharge, ground water effluent, and surface runoff diverted from Los Angeles River to Headworks Spreading Grounds.

+ Denotes insignificant amount.

Ground Water Table Elevations

During the 1974-75 water year, the Watermaster collected and processed data to determine prevailing ground water conditions in ULARA during the spring and fall of 1975 (Plates 3 and 4). Data for lines of equal ground water elevation for Sylmar, Chatsworth, and Santa Monica foothills were obtained from the City of Los Angeles and for the remaining area, from LACFCD.

Change in ground water surface elevation from fall of 1974 to fall of 1975 as presented in Plate 5 reflects the effects of variations in spreading, ground water extractions, and rainfall.

The area around Hansen spreading basin shows a drop in ground water elevation due to decreased spreading whereas the areas around Pacoima and Tujunga show a rise due to increased spreading. The area south of Glendale in the Los Angeles Narrows, shows a drop due to increased ground water extraction by Los Angeles at its Pollock Field. The area southeast of Burbank shows a rise despite a small increase in ground water extractions. The areas in the vicinity of Van Nuys and North Hollywood show a drop due to a large increase in ground water extractions.

Figures 1 and 2 depict the water levels at key wells and their approximate location are indicated by number shown on map on Figure 2. A more exact location is shown on Plate 2.

Waste Water Reclamation

The reclamation of waste water could provide a source of water for irrigation, industrial, recreational, and possibly, domestic use. Seven waste water treatment plants are in operation in ULARA, one is under construction and another is being considered (Plate 2). A tabulation of the operating waste water reclamation plants is shown in Table 6.

The Los Angeles-Glendale Waste Water Reclamation Plant project is now expected to begin operations sometime between March and June 1976. Treatment capacity will be 20 million gallons per day (mgd), with 7.5 mgd for irrigation and fire protection, 2.5 mgd to the City of Glendale for its steam plant cooling water, and 10 mgd discharged into the Los Angeles River.

TABLE 6. WASTE WATER RECLAMATION PLANTS

Plant	Quantity Treated in acre-feet
San Fernando Basin

City of Los Angeles Valley Settling Basins	1,019[b]
Indian Hills Mobil Homes	21[c]
Rocketdyne (Santa Susana Field Laboratory)	52[d]
The Independent Order of Foresters	15[c]
Verdugo Basin	
Crescenta Valley County Water District	103[c]

a/ Cooling towers used 1,764 acre-feet, balance to Los Angeles River.
b/ DWP used 35 acre-feet for percolation test at Headworks, balance to city sewer.
c/ Used for land irrigation.
d/ Plant 1: 0.3 acre-feet, Plant 2: 52 acre-feet.

The design of the Sepulveda Basin Water Reclamation plant has been completed. It provides for a plant capacity of 40 mgd, with treated effluent being used for irrigation of the Sepulveda Basin recreation area and being available for ground water recharge. The project will not proceed until the Environmental Protection Agency completes an assessment of facilities' needs and approval of State and Federal construction grants has been received.

Water Quality

Water resources management must take into account water quality in analyzing water supply factors. Water quality is in constant flux as a result of changes in the water supply environment. Monitoring changes in water quality is important because it serves as a measure of natural phenomena and the effectiveness of management plans.

Imported Water

A. Owens River and Mono Basin water is of excellent quality, being sodium bicarbonate in character. Its total dissolved solids (TDS) averaged about 214 milligrams per liter (mg/l) for 30 years before 1969, the highest record being 322 mg/l, on April 1, 1946, and the lowest, 149 mg/l, on September 17, 1941. Average TDS for 1974-75 was slightly higher than for 1973-74.

B. Colorado River water is predominately sodium-calcium sulfate in character, changing to sodium sulfate after treatment to reduce total hardness. Samples taken at the Burbank turnout between 1941 and 1973 indicated a TDS high of 875 mg/l in August 1955 and a low of 625 mg/l in April 1959. The average over the 32-year period is approximately 743 mg/l. During the 1974-75 water year, a program of blending State Project water with Colorado River water was begun. The beneficial effect of this program is shown by a decrease of 163 mg/l TDS at Eagle Rock Reservoir.

C. Northern California water is of sodium-calcium bicarbonate-chloride-sulfate in character. It generally contains less TDS and will be softer than local and Colorado River water. TDS averaged 274 mg/l and hardness averaged 139 mg/l during 1974-75, much better in quality than the prior year. Water quality should improve as storage in Castaic Reservoir is increased.

Surface Water

Surface runoff contains salts dissolved from rocks in the tributary areas. Surface water is calcium bicarbonate in character. In 1974-75, low flows above the Los Angeles Narrows had an average TDS content of 818 and a total hardness of 370 mg/l.

Ground Water

The character of ground water from the major water-bearing formations is of two general types, each reflecting the composition of the surface runoff in the area. In the western part of ULARA, it is calcium sulfate in character, while in the eastern part, including Sylmar and Verdugo Basins, it is calcium bicarbonate. Ground water in ULARA is moderately hard to very hard.

Ground water is generally within the recommended limits of the USPHS Drinking Water Standards, except perhaps for wells in the western end of the valley having excess concentrations of sulfate and those in the lower part of the Verdugo Basin having abnormally high concentrations of nitrate.

Water quality studies indicate that, except for short periods, the quality of imported water from Owens River and Mono Basin and northern California is superior to local water. A comparison of the various water sources as to TDS, sulfate, and chloride content is shown in Figure 3. Representative mineral analyses of imported surface, and ground waters for 1974-75 are contained in Table 7. (Note: Records for water from the State Water Project are shown on a monthly basis since use commenced in May of 1972.)

City of Los Angeles' water quality data indicate that the long term trend of increasing TDS in ground water has changed significantly since the inception of Watermaster management. Water quality changes appear to have stabilized in the eastern portion at the San Fernando Basin and slowed in the western portion.

State Water Project Water Recharge Study

A Subcommitte of the Advisory Board met throughout the year with LACFCD, DWR, and MWD representatives in an effort to study DWR's proposal to store water from the State Water Project in the San Fernando Basin. The San Fernando Basin study has been established as a prototype model for similar ground water basins throughout the state with the objective of developing the legal, financial, and physical means of storing water underground as a method of meeting or sustaining the firm yield of the State Water Project. This study recognizes the interest of the cities in storing water in their own behalf within the Basin.

The plan under investigation will rely on MWD facilities to convey State Project water from Castaic Lake to the Basin at the east portal of MWD's San Fernando Tunnel. With additional minor construction, water will be conveyed via existing flood control channels to Lopez, Pacoima, and Tujunga Spreading Basins. In addition, water will be stored through an exchange program whereby the cities within the Basin will receive State Project water directly into their system and would, in turn, leave a like quantity of water in the Basin.

The study involves the spreading and storing of up to 320,000 acre-feet over a five-year span to meet unforeseen shortages from the State Water Project due to extended outages of import facilities or exceptionally severe droughts. A report on the feasibility of this project should be out by the middle of 1976.

Ground Water Contamination by Gasoline

During the 1974-75 water year, progress continued toward abating gasoline pollution near Forest Lawn Cemetery. (The history of this major water quality problem was described in the 1968-69 and 1969-70 Watermaster reports.)

The Western Oil and Gas Association (WOGA) has continued its efforts to abate the pollution. California Regional Water Quality Control Board (CRWQCB), Los Angeles Region, and SWRCB are playing leading roles in ensuring effective, expeditious abatement. DWR has advised the Boards regarding the technical aspects of abatement; and the City of Los Angeles' Department of Water and Power (LADWP) and WOGA have effectively monitored the polluted area.

Nine progress reports have been submitted by WOGA to CRWQCB, Los Angeles Region, the most recent describing progress to date.[1/] Locations and other features currently related to the monitoring and pumping programs are shown in Figure 4. The cleanup program was discussed in the Watermaster's 1971-72 report.

Plans were initiated in 1972-73 to reduce the number of wells being pumped and monitored, and 17 have been destroyed since that time with the approval of CRWQCB, Los Angeles Region (Appendix D).

1/"Ninth Progress Report to Los Angeles Regional Water Quality Control Board on Amelioration of Ground Water Contamination by Gasoline near San Fernando Road in Glendale and Los Angeles". July 1, 1975.

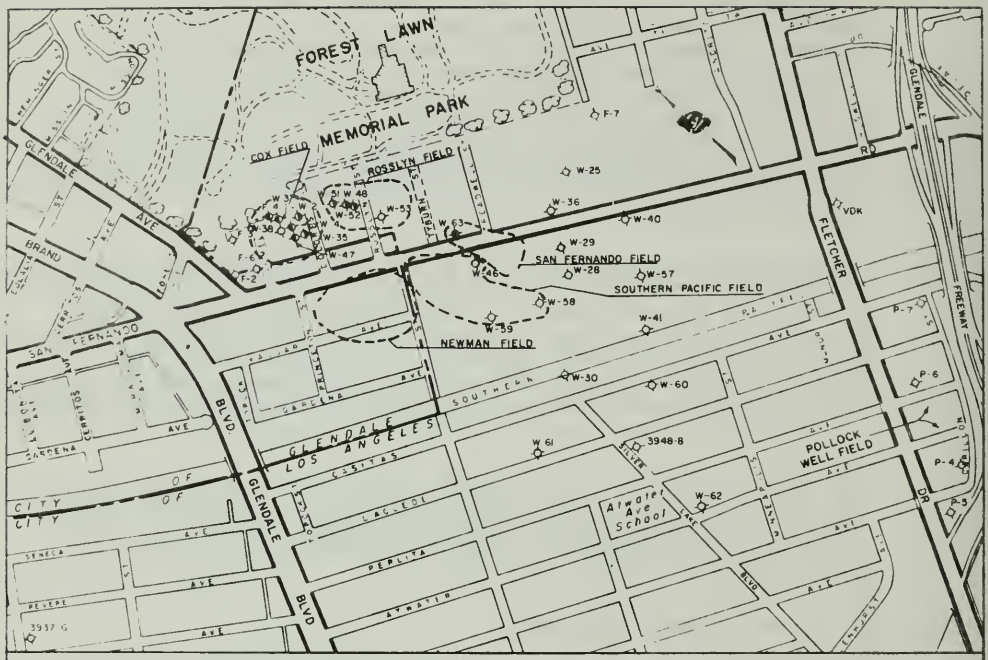

Figure 4- GASOLINE POLLUTION- FOREST LAWN, GLENDALE, LOS ANGELES

DEPARTMENT OF WATER RESOURCES, SOUTHERN DISTRICT, 1976

The monitoring situation as of July 1, 1975 is summarized as follows: There was a trace of liquid gasoline in FL-4 (upper), slight traces in wells 3 and 4, gasoline odors in wells 47 and 63, and slight gasoline odors in wells 48, 51, and 52. All other observation and pumping wells were free of odor.

Infrared analyses for hydrocarbons are performed weekly on samples collected by WOGA or by personnel of the LADWP, and analyzed by LADWP. Results have been quite low during the past year, except for a few wells (notably W-63 and FL-4 upper), and show an improving trend. During the period of this report, for example, all samples were 3.2 mg/l or less, except for 14 mg/l at W-63.

The CRWQCB granted a Permit to WOGA on 16 December 1974 for discharge from the Pittman tank into Sycamore Canyon Wash. The only remaining well in the San Fernando field (W-63) has been connected to a pipeline leading to the Pittman tank. The effluent from the Pittman tank has been meeting the requirements of the permit with one exception, namely the limit of 2.0 mg/l for total organic carbon (TOC). On 2 April 1975, WOGA requested the CRWQCB to either drop or raise this restriction on TOC. Information from the LADWP and the State Department of Health indicated that water from unpolluted wells have TOC values ranging from 2.0 to 5.0 mg/l. The CRWQCB will look into the rationale for the TOC limit.

In an attempt to minimize withdrawal of ground water from this area and in an effort to create hydraulic gradients that will move contaminated water into wells from which it can be withdrawn, WOGA has been pumping contaminated water from some wells and injecting clean aerated water into other wells. At the end of June 1975, for example, water was being pumped continuously from W-3, W-4, W-47, and FL-6.

At the same time, clean water from FL-6 was being aerated and injected into wells No. 2 and 53 during June 1975.

The operation of W-63 has been experimental in an effort to develop a continuous gradient from the Cox and Rosslyn fields toward the L. A. River. At the start of 1975 the well was not being pumped. From 9 February to 26 March, clean water was injected, then the well was pumped until 20 June 1975. As of 1 July 1975 it was not being pumped. This well occasionally exhibits traces of gasoline and it always has a gasoline odor.

In an effort to clean up FL-4 (upper), where a seal separates the casing for the upper aquifer from that for the lower aquifer, WOGA arranged with Forest Lawn and assisted in the construction of a pipeline so that Forest Lawn could use water from FL-2 in lieu of that from FL-4 (lower), starting on 29 April 1975. Thereafter, WOGA started to inject clean water into FL-4 (upper) in an attempt to move contaminated water from this area toward W-3 and W-4, which were being pumped. This effort was only partially successful. Injection was stopped on 27 June and Forest Lawn began pumping FL-4 (lower) for irrigation on 1 July 1975.

For the period from 1 January 1975 to 1 July 1975, WOGA has concentrated on the fourth objective established by the CRWQCB, namely to attempt to accelerate the final clean-up and removal of traces of gasoline. The three other objectives have all been well attained. These are: to monitor the areal extent of gasoline contamination, to remove any free gasoline, and to contain the spread of gasoline and its vapors. Work continues on the final clean-up. Wells that are no longer needed for monitoring purposes have been plugged and sealed in accordance with procedures and rules established by the City of Glendale and the joint L. A. County and City Health Department. An ultimate monitoring network and its rationale have been prepared for transmittal to the CRWQCB.

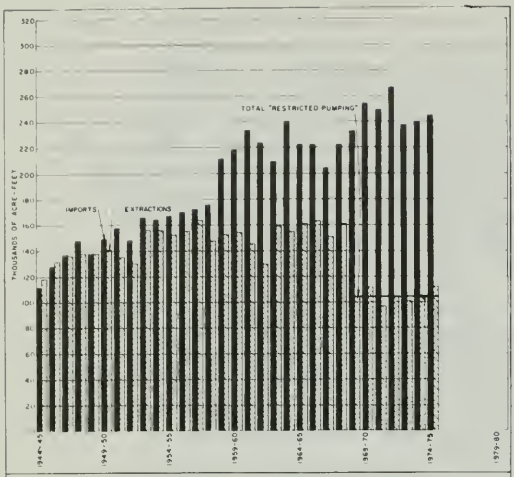

Figure 5- GROUND WATER EXTRACTIONS AND USE OF IMPORTED WATER IN UPPER LOS ANGELES RIVER AREA

DEPARTMENT OF WATER RESOURCES, SOUTHERN DISTRICT, 1976

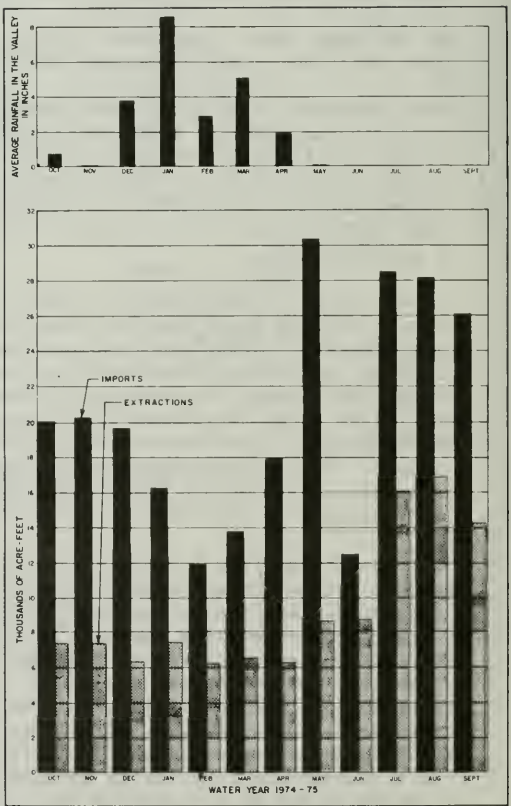

Figure 6 - MONTHLY WATER DEMAND AND AVERAGE RAINFALL IN UPPER LOS ANGELES RIVER AREA

DEPARTMENT OF WATER RESOURCES, SOUTHERN DISTRICT, 1976

Water delivered for use in ULARA is either imported water, local ground water, local surface diversions, or a mixture, depending on the area and water system operation. During the 1974-75 water year, water purveyors in ULARA served approximately 356,000 acre-feet to their customers. Of this total, approximately 112,000 acre-feet were extracted and the remaining 244,000 acre-feet were imported. The Basin contains 548 wells, of which 171 are active and 377 are inactive, observation, test, capped, etc. No wells were drilled and nine were destroyed in 1974-75 (Appendix D).

The adjudication of ground water rights in ULARA restricted all ground water extractions, effective October 1, 1968. On that date, extractions were restricted to approximately 104,000 acre-feet per water year. This amounted to a reduction of approximately 50,000 acre-feet below the previous 6-year average.

Under the Judgment, no determination was made regarding overdraft or surplus in the Eagle Rock Basin. Therefore, no restrictions on ground water extractions have been imposed on that Basin.

Except for the Sparkletts Drinking Water Corporation and Deep Rock Water Company, there are no parties to the Judgment that extract water from Eagle Rock Basin. The safe yield of the Basin, under 1964-65 conditions, was set at 70 acre-feet.

The restriction on ground water extractions has been a great factor in the increase of imported water to ULARA during the past six years.

Figure 5 illustrates the annual ground water extractions and total water imported in ULARA, beginning with the 1944-45 water year. Note the change from 1968-69 through 1974-75.

It can also be noted that for 10 years before pumping was restricted, imports exceeded extractions by from 50,000 to 60,000 acre-feet per year and that for the seven water years, 1968-69 - 1974-75, the difference jumped to between 120,000 and 160,000 acre-feet. Due to restricted pumping in ULARA, any substantial increase in water demand in the future will show an increase of imports only.

Figure 6 provides an analysis of the monthly relationship between rainfall, ground water extractions, and imported supply. Data relates to all of ULARA and not to any one specific ground water basin therein. The precipitation values were obtained from stations on the valley floor (Table 1).

Ground Water Extractions

On April 26, 1968, the Watermaster wrote to all parties known to be active that ground water extractions in ULARA would be reduced and controlled by him. Control would be in accordance with the Judgment, which limits the amount of ground water each party can extract annually from each of the separate basins to an amount referred to as "Restricted Pumping".

a/ Refer to Table 11 and Appendix A for information concerning assignments of Restricted Pumping or prior ownership.
b/ Reduction in City of Los Angeles extraction pursuant to separate Stipulated Judgment.
c/ Reverts to City of Los Angeles as a carryover.
d/ Includes 374.12 acre-feet, authorized by the Advisory Board and Watermaster. See Chapter IV.
e/ Includes 1,598.59 acre-feet, authorized by the Advisory Board and Watermaster. See Chapter IV.
f/ Includes extractions from Reseda Wells which totaled 1.27 acre-feet, and 7,162.93 acre-feet authorized by the Advisory Board and Watermaster pursuant to the "Stipulation for Emergency Spreading and Extraction". See Chapter IV.
g/ Includes year-end balance of parties to Stipulated Judgments.
h/ Amount to be returned to basin by spreading imported water or foregoing right to extract water or by combination of both.
i/ See footnote (f).
k/ In 1974-75, the City returned 9,221.00 acre-feet by spreading, thus reducing the balance.
l/ Acquired by the City of Los Angeles.
m/ Allowable carryover by special Watermaster authorization. Amount to be extracted in following two years. See Chapter IV of this report for details.

* *Does not reflect the California Supreme Court decision of May 12, 1975. (See page 10.)*

Table 8 presents a balance sheet which summarizes each party's water account by listing its Restricted Pumping allowable carryover from 1973-74; (see Appendix A for changes); any additional allowable pumping as the result of a water right assignment; amount of ground water extracted during the 1974-75 water year; and the amount that can be carried forward to the succeeding water year.

To provide flexibility in the control of ground water extractions, the Judgment contains various provisions which allow parties to carry over into the succeeding water year a portion of their unused water right and, in some cases, to overextract. This flexibility clause was provided to assist the parties in meeting unforeseen emergencies in water demands. One provision allows parties to carry over from one water year to another any unused Restricted Pumping up to an amount not to exceed 10 percent of their Restricted Pumping.

The flexibility clause also allows parties to overextract up to an amount equal to 10 percent of their Restricted Pumping. However, any overextraction will be deducted from the Restricted Pumping in the succeeding water year. Chapter IV contains additional information on this provision.

In addition to the flexibility clause, the City of San Fernando is allowed, by the Judgment, to exceed its assigned Restricted Pumping in Sylmar Basin. The additional allowance for the City of San Fernando is described in the Judgment as "Physical Solution-Sylmar Basin". This provision allows the City of San Fernando to extract up to 850 acre-feet of water per year in addition to the amount that it has received under its Restricted Pumping. If the City of San Fernando takes, diverts, or extracts water in addition to its Restricted Pumping, it must immediately notify the City of Los Angeles and the Watermaster in writing, and the City of Los Angeles must reduce its extractions in an amount equal to the amount that the City of San Fernando has exceeded its rights. Chapter IV describes the 1974-75 operation.

The Judgment, in Section IV, also allows various parties to divert and extract water from the San Fernando Basin in accordance with the terms and conditions of the stipulated Judgments between the City of Los Angeles and said parties (Case No. 650,079). The City of Los Angeles, in turn, shall deduct from its Restricted Pumping for each year the aggregate amount of water extracted pursuant to the separate stipulated Judgments.

At the commencement of each water year, the City of Los Angeles advises the Watermaster of the estimated amount of water each party to the stipulated Judgments will pump during the water year (Appendix A). The City then reduces its extractions in the San Fernando Basin in an amount equal to the estimates. For each subsequent year, the City of Los Angeles will reduce its extractions by the amount of water that said stipulated parties' extractions exceeded the estimates for the preceding year. Should the stipulated parties' extractions be less than the estimate for that year, the City of Los Angeles may increase its extractions by that amount in the next succeeding year.

The February 1971 earthquake resulted in such heavy damage to the City of San Fernando's water facilities and the City of Los Angeles' terminal storage complex at Van Norman Reservoir that changes in allowable ground water extractions for these two parties were required. As a result, the City of Los Angeles was allowed to exceed its Restricted Pumping in the San Fernando Basin pursuant to the "Stipulation for Emergency Spreading and Extraction" (Appendix A, 1970-71 report). Table 8 shows a separate accounting of this item. The City of San Fernando, in turn, was allowed to extract the unused 1970-71 water right balance of 1,526.06 acre-feet in the ensuing three water years. A further explanation of this authorization and extension is discussed in Chapter IV.

The metered ground water production from each active well is listed by basin and by party in Appendix B, Table B-1. This tabulation presents the total ground water production as reported by each party. Plates 6 and 7 depict the service area wherein each party delivers its water supply.

Extractions by Nonparties

In order to keep the parties and the Court apprised of all the ground water extractions within ULARA, the Watermaster has attempted to collect information on nonparty ground water extractions.

A nonparty is an entity which was not named in the ULARA water right suit. These nonparties and parties which were dismissed by the court do not come under the jurisdiction of the Watermaster.

To the best of the Watermaster's knowledge, WOGA, The Metropolitan Water District of Southern California (MWD), and Glen A. Berry are the only nonparties extracting ground water in ULARA.

No report on ground water extractions is made as to the parties dismissed from the action: Glenhaven Memorial Park, Incorporated; Los Angeles County Waterworks District No. 21, etc., which are still active pumpers in the hill and mountain areas of ULARA.

Ground water extracted by MWD and WOGA is also shown in Table B-1. Extractions by Glen A. Berry are estimated at 3 acre-feet per year (see Chapter IV) and are not shown in Table B-1.

Water Wells in ULARA

The Report of Referee described the wells in ULARA according to a number-location identification system devised by the Los Angeles Flood Control District. However, the Watermaster has redesignated the wells in accordance with his identification system.

A State Well Numbering system was adopted by the State several years ago that utilizes the U. S. Public Land Survey System. A graphical illustration and description of the coding system in ULARA is shown in Figure 7.

Each water well in ULARA was assigned a State Well Number to simplify the administration of the Judgment and the monitoring of ground water extractions. A cross-index between State Well Numbers and the county

numbers was completed in March 1972 and made available to all interested parties.

Plate 2 on page 17 shows the location of all wells (party and nonparty) known to be in existence by the Watermaster as of September 30, 1975. The wells are plotted and coded in accordance with the above procedure and that shown in Figure 7.

Wells reported to the Watermaster as having been drilled or destroyed in 1974-75 are listed in Appendix D.

As a matter of course, the Watermaster locates all new wells by survey and assigns a new State Well Number. The parties that submit detailed information as to the location of the well will preclude the Watermaster's requirement for a survey. Each party is required to notify the Watermaster whenever a new well is drilled or a well is destroyed.

State well numbers that identify each water well in ULARA are derived from a system based on the U.S. Public Land Survey. Each number consists of township and range designation, a section number, a letter representing the 40-acre tract in which the well is situated, a sequence number indicating the chronological order in which the well number was assigned, and a letter representing the base and meridian. The last letter is frequently omitted from well numbers in a single area because all wells there share a single base and meridian. Well numbers are assigned by the Watermaster.

The components of well No. 1N/14W-12C03S, for example, are identified in the following breakdown:

Township	Range	Section	Tract	Sequence number	Base and meridian
1N	14W	12	C	03	S

The derivation of the components is illustrated below:

Imports and Exports of Water

Residential, commercial, and industrial expansion in ULARA requires the importation of additional water supplies to supplement that provided by the ground water basins. The City of Los Angeles and MWD have kept abreast of this demand by continuing to expand their facilities for the importation of water.

The City of Los Angeles now has a second aqueduct capable of bringing in an additional supply of Owens River and Mono Basin water at the rate of more than 130 million gallons a day.

In addition to the City's aqueducts, MWD's Colorado River aqueduct delivers water to the Cities of Burbank, Glendale, Los Angeles, and San Fernando. On November 9, 1971, by unanimous approval of a resolution by MWD's Board of Directors, the City of San Fernando became a member agency of MWD. Thus, San Fernando can now obtain supplemental water on a permanent basis from MWD supplies and participate in all programs for the future development and distribution of such water.

The Crescenta Valley County Water District and La Canada Irrigation District also import Colorado River water through the facilities of the Foothill Municipal Water District, which is a member agency of MWD.

The State Water Project now delivers water from northern California to MWD at Castaic Reservoir, thence through the MWD Foothill Feeder to the Joseph Jensen Water Filtration Plant in ULARA.

Exports from ULARA, exclusive of sewage, are limited to the City of Los Angeles, which exports imported and ground water. Table 9 summarizes the nontributary imports and exports from ULARA. Ground water imports and exports in and out of ULARA are listed in Table 10.

Facilities importing nontributary water are shown on Plate 6, page 45.

The 18-foot San Fernnado Tunnel will be completed to its terminus at Lopez Wash on November 25, 1975.

Physical Data by Basins

To comply with the Court's directive, the Watermaster has collected and summarized data in Table 10 which show the water supply and disposal in each of the basins.

The information for Table 10 was submitted by the parties. In instances where estimates were made, such as water delivered to hill and mountain areas, sewage exported, etc., estimates were made by the parties and based upon methods consistent with previous estimates computed by SWRCB for the San Fernando Valley Reference. The Watermaster likewise made computations of subsurface outflows based on similar computations made by SWRCB. The Cities of Glendale and Burbank are reevaluating the quantities delivered to hill and mountain areas due to possible misinterpretation of referee's boundary lines between the valley fill and hill and mountain areas.

Some of the figures submitted for Table 10 are partially estimated, due to lack of information at the time of submittal. However, the actual figures based on measured values are subsequently submitted to the Watermaster for his permanent records. The revised data are available from the Watermaster on request.

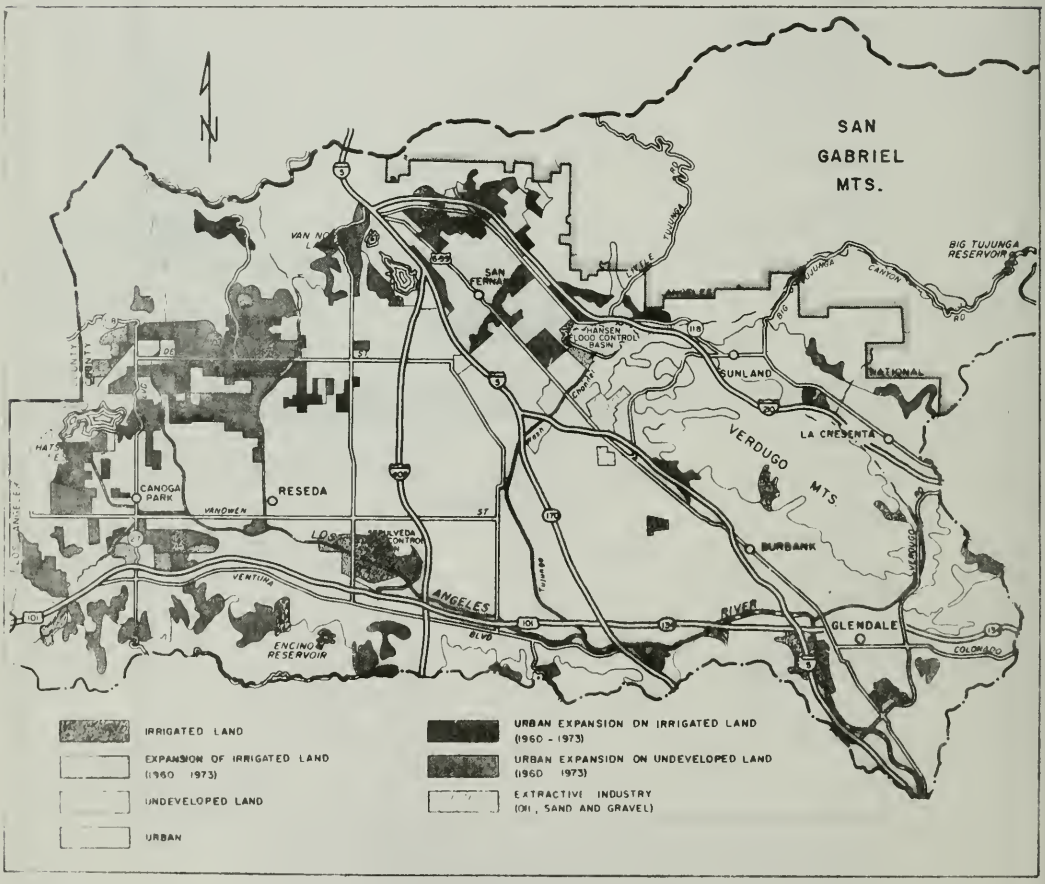
h/ Based on 29-year average (1929-57).
i/ Information not available.
r/ Estimated in Supplemental No. 2 to Report of Referee for dry years 1960-61. Currently, data not available for direct evaluation.

A land use inventory of Coastal Los Angeles County, including ULARA, was conducted by DWR and was reported in the District Report "Coastal Los Angeles County Land-Use Study, 1973". The study, based on January and February 1973 aerial photography, was conducted from August 1973 to September 1974.

Water use is intimately associated with land use. Results from this study are extremely valuable to water planners. Detailed land use tabulations and the District Report are available for inspection in DWR's Southern District office. Shown below are the 1973 land-use characteristics for ULARA as surveyed and depicted in the above mentioned report.



LAND-USE CHARACTERISTICS

IV. ADMINISTRATION OF THE JUDGMENT

The Department of Water Resources, as Watermaster of ULARA, administers the Judgment and keeps the Court fully apprised of any violations or changes in administration.

Assignments of Restricted Pumping

In accordance with the provisions of the Judgment, the Watermaster records all changes of ownership, transfer, or assignment of Restricted Pumping rights. Table 11 lists all assignments, parties, and amounts involved. Appendix A records the documents used to assign Restricted Pumping rights by each of the parties as of September 30, 1975. During the 1974-75 water year, the City of Los Angeles submitted estimates on the amounts to be extracted by those parties having separate stipulated Judgments with the City. The clause that allows the parties with stipulated Judgments to extract ground water under the City of Los Angeles' Restricted Pumping right is covered by Section V, Paragraph 2 of the Judgment. The City of San Fernando did not exercise its right to purchase water from the City pursuant to the "Physical Solution-Sylmar Basin", which is described in Section VII, Paragraph 2 of the Judgment.

TABLE 11. ASSIGNMENTS OF RESTRICTED PUMPING

Party	Assignment and amount, in acre-feet			Party
San Fernando Basin				
Pursuant to Stipulated Judgments				
Conrock Company[a/]	Stipulated	1,700.00[b/]	from	Los Angeles, City of
Livingston-Graham, Inc.	Stipulated	470.00[b/]	from	Los Angeles, City of

Plumb and Hersh	Granted	609.00	from	Fidelity Federal Savings and Loan

a/ Formed by merger of California Materials Company and Consolidated Rock Products Company.
b/ Estimate submitted by City of Los Angeles, see Appendix A.

In addition to the Cities of Los Angeles and San Fernando, a number of parties availed themselves of the opportunity to license water rights to meet their demand.

The Watermaster was notified that, by mutual agreement, the license between Sportsmen's Lodge, Incorporated and Forest Lawn Memorial Park for 10 acre-feet of Restricted Pumping during 1973-74 was voided. (See Table 11 in the 1973-74 Annual Report). The change in carryover has been incorporated in Table 8.

In order that a water right license or sale agreement be in force during the water year, it will be the Watermaster's policy that it be signed before or during the water year in question. Failure to submit a license or sale document to the Watermaster by August 31 of the water year in question may be considered evidence that such an agreement was never consummated during such water year.

Overextractions

In restricting ground water extractions in ULARA, it was foreseen that there would be unavoidable fluctuations in water use occurring from year to year. Therefore, the flexibility clause was included in the Judgment allowing each party to vary its extractions within reasonable limits so that it could pump more or less than its Restricted Pumping with equivalent debits or credits being applied to its extractions in the subsequent water year.

The provisions of Section VIII of the Judgment allows each party a flexibility of 10 percent of its Restricted Pumping right. In other words, a party may underpump or overpump by 10 percent of its Restricted Pumping and in the succeeding water year increase or decrease (whichever is applicable) its pumping by the same amount. Table 12 summarizes all overextractions and violations of the Judgment.

Of the 12 parties that exceeded their allowable extractions for 1974-75, six were in violation of the Judgment.

The parties in violation are subject to possible court action. Recommendations are discussed under "Findings, Determinations and Recommendations by the Watermaster".

Table 12 also lists Conrock Company, Livingston-Graham, Inc., and Sears, Roebuck and Company, which are parties that are subject to a Stipulated Judgment with the City of Los Angeles. These parties' extractions, in excess of the estimates submitted by the City, will be adjusted against the City's Restricted Pumping right during the 1975-76 water year. As such, the parties in question are not considered to be in violation of the Judgment.

a/ Refer to Column (1)+(3), Table 8.
b/ Computed as 10 percent of Column (1) unless otherwise noted.
c/ Party entitled to extract ground water per stipulated Judgment with City of Los Angeles. The City will, in succeeding water year, decrease its extractions by the amount of the overextraction shown under Column (5).
d/ Includes 5,638.52 acre-feet overextracted in 1970-71 and 1973-74 pursuant to "Stipulation for Emergency Spreading and Extraction".
e/ Includes 7,162.93 acre-feet overextracted pursuant to "Stipulation for Emergency Spreading and Extraction".
f/ Not to be considered an overextraction per se, as the "Stipulation for Emergency Spreading and Extraction" permits the City of Los Angeles to overextract. In 1974-75, the City returned 9,221.00 acre-feet by spreading, thus reducing the balance.
g/ For City of Los Angeles, the allowable overextraction is 10 percent of its "Restricted Pumping" shown in Column (1) of Table 8.
h/ Party in violation of the Judgment either as a result of having a zero water right or having exceeded its allowable extraction by 10 percent of its "Restricted Pumping" shown in Column (1).
i/ Company incorporated with City of Los Angeles.

* *Does not reflect the State Supreme Court decision of May 12, 1975.* *(See page 10.)*

Findings, Determinations, and Recommendations by the Watermaster

The Watermaster finds six parties in violation of the Judgment as a result of overextractions during the 1974-75 water year. The parties in violation are John and Barbara Mena, Monteria Lake Association, Sportsmen's Lodge, Inc., Valhalla Memorial Park, Charles T. Brown, and The Church of Christ of Latter-Day Saints.

John and Barbara Mena extract approximately 1 acre-foot a year for domestic purposes; they have not been requested by the Watermaster to lease water rights to make up their overextractions. In the view of the small amount of extraction involved, the Watermaster recommends no action be brought against John and Barbara Mena at this time.

Monteria Lake Association has not extracted any water since the 1968-69 water year; however, the Association's account continues to show an accumulated carryover deficit since they have not leased any water rights to offset the accumulated overextractions. They were advised on March 5, 1971 that they eliminate their deficit; to date the Association has not taken any action. Therefore: THE WATERMASTER DOES HEREBY RECOMMEND THAT THE COURT TAKE ACTION AGAINST MONTERIA LAKE ASSOCIATION FOR NONCOMPLIANCE.

Sportsmen's Lodge, Inc. negotiated a lease with Forest Lawn Company during the 1973-74 water year which was voided. This resulted in inadequate carryover from 1973-74 into 1974-75 to satisfy their water needs for 1974-75. They have taken action to cover their overextraction. The Watermaster recommends no action be brought against Sportsmen's Lodge, Inc.

Valhalla Memorial Park has taken action to cover their overextraction. The Watermaster recommends no action be brought against Valhalla Memorial Park.

Charles T. Brown's overextraction was only slightly above the 10% limit and he is taking action to lease sufficient rights to cover the overextraction and his 1975-76 water needs. The Watermaster recommends no action be brought against Charles T. Brown.

The Church of Jesus Christ of Latter-Day Saints has not reported any extractions of ground water since June 1973 and has not appeared to make any effort to eliminate its accumulated overextractions. At the conclusion of the 1971-72 water year, it was advised by the Watermaster of the considerably large amount of overextraction and was asked to please advise the Watermaster what action it would take to correct the cited deficiency. As of January 15, 1976, no notification has been received by the Watermaster. Therefore: THE WATERMASTER DOES HEREBY RECOMMEND THAT THE COURT TAKE ACTION AGAINST THE CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS FOR NONCOMPLIANCE.

As a result of the February 9, 1971, earthquake and the shutdown of the First Los Angeles Aqueduct during the period from February 26, 1974 to April 4, 1974 for major repair work, the City of Los Angeles had to depend on its ground water to meet water demand. To help solve the problems caused by these emergencies, the City requested permission to extract pursuant to the provision of the "Stipulation for Emergency Spreading and Extraction". The City's requests were approved by the Watermaster and the ULARA Advisory Board. The extractions are subject to repayment by either spreading or curtailment of ground water extractions in future years.

As of September 30, 1975 this report shows that the City had 3,580.45 acre-feet under the special account.

Following is a summary of the City's account pursuant to the Stipulation and does not reflect the California Supreme Court decision of May 12, 1975.

Water Year	Extraction (A.F.)	Spreading (A.F.)
1970-71	2.055.92	1,077
1973-74	4,659.60	0
1974-75	7,162.93	9,221
Totals	13,878.45	10,298
Amount Spread	10,298.00	
Remaining	3,580.45 A.F.	

(A copy of the Stipulation for Emergency Spreading and Extraction is shown in Appendix A of the 1970-71 Watermaster report.)

During the February 4, 1972 ULARA Advisory Board meeting, a motion was approved for the City of San Fernando to be allowed to extract its unused water right during the subsequent three water years. The Watermaster concurred in view of the emergency resulting from the 1971 earthquake, which prevented the City from pumping its share of ground water from the Sylmar Basin.

The Watermaster subsequently approved, subject to the continuing jurisdiction of the Court, the City of San Fernando's allowable carryover of extraction during the three subsequent water years, amounting to the 1,526.06 acre-feet it was unable to use in 1970-71. During the 1971-72 and 1972-73 water years, the City extracted 288.43 and 227.11 acre-feet of carryover, respectively, leaving 1,010.52 acre-feet which it could have extracted during the 1973-74 water year. On September 5, 1974, the City asked for an additional extension of two years through the 1975-76 water year to complete the extraction of its water right entitlement, since it could not fully utilize it in 1973-74.

That request was submitted to the Advisory Board on September 19, 1974, and was approved. The Watermaster has therefore extended the 1973-74 balance of 684.66 acre-feet to be used during the water years 1974-75 and 1975-76.

As mentioned in Chapter III, to the best of the Watermaster's knowledge and information on hand, Glen A. Berry, WOGA, and MWD are the only nonparties extracting ground water in the three ground water basins. The Watermaster has approved the latter two operations which are necessary for the control of gasoline pollution at Forest Lawn and the construction of the San Fernando Tunnel of the MWD Foothill Feeder.

Glen A. Berry drilled a well at his residence in Chatsworth on March 3, 1972, and is currently extracting ground water for his lawns, shrubs, and trees. He was informed on June 20, 1972 of the ULARA Judgment, which restricts ground water use in ULARA and places the use thereof under the Court's jurisdiction. The Watermaster has not tested the well capacity and at this time estimates the water use at approximately 3 acre-feet per year, based on water use of 2.8 acre-feet per acre per year used for lawns and shrubs.

V. ADMINISTRATIVE COSTS

ULARA was established as a "Watermaster Service Area" in accordance with Part 4, Division 2, of the California Water Code. Pursuant to the provisions of its Section 4201, the cost of Watermaster Service is payable one-half by the State and one-half by the parties. Thus, the parties are assisted by the State in distributing the water economically.

On the other hand, the Judgment describes the procedures for apportioning the costs among the parties and how it should be collected. It requires that each year the Watermaster prepare a tentative budget covering the forthcoming July 1 to June 30 fiscal year. (Watermaster Service and the annual report are on a water year basis, i.e., October 1 through September 30.)

The Judgment also provides that the parties' share of the budget be borne by each party in the proportion that its "Mutual Prescriptive Right" bears to the total "Mutual Prescriptive Right" of all parties in ULARA. However, no party having 50 acre-feet or less of "Mutual Prescriptive Right" shall be assessed any charges.

The Watermaster is required to include the tentative budget and its apportionment in the annual report, so that it may be reviewed and approved by the Advisory Board on or about February 1 of each year. The tentative budget is subsequently mailed to the parties as part of the annual report on or before March 1 of each year. If there are any objections to the budget, they must be presented in writing to the Court and to the Watermaster within 30 days (on or before March 31) after the mailing of the annual report. If no objections are received, the budget becomes final.

Invoices are mailed on or about April 1 and all payments must be received, whether objections are filed or not, within 60 days (on or before May 1) after mailing of the annual report.

Approved Budget for 1974-75

In accordance with the Judgment, the Watermaster submitted a budget for the fiscal year July 1, 1974 through June 30, 1975 as part of its 1972-73 annual report. The tentative budget and annual report were reviewed and approved by the Advisory Board on February 4, 1974.

The parties had 30 days after the mailing of the annual report to submit their objections to the tentative budget. No objections were received by March 31, 1974 and the budget became final. Table 13 presents the 1974-75 budget as approved by the Advisory Board and parties.

Invoices for each party's proportionate share of the budget were mailed on or about April 1 and all payments were received prior to the deadline of May 1, 1974. Each party's proportionate share of the 1974-75 budget is shown in Table 14. A recapitulation for the Cities of Glendale and Los Angeles is made since they are billed in two separate basins.

a/ Rent, utilities, auto rental, communications, retirement, employee's health plan, and workman's compensation insurance.
b/ General supplies, travel-in-state, training.
c/ Total credit to parties in 1975-76 fiscal year, subject to delayed charges or credits.

During the sixth year of Watermaster Service, the work load increased slightly. As a result, the expenditures in 1974-75 were higher when compared with the 1973-74 fiscal year.

Income and expenditures for Watermaster Service during the 1974-75 fiscal year are shown in Table 15. In accordance with the California Water Code, any credit or debit balance remaining at the end of the fiscal year is carried forward into the succeeding fiscal year. The parties' share of the carryover into the 1975-76 fiscal year totaled $1,909.24.

Approved Budget for 1975-76

The tentative budget for the fiscal year July 1, 1975, through June 30, 1976, was submitted by the Watermaster for review and approval by the Advisory Board on February 10, 1975. The parties had 30 days after the mailing of the annual report for submitting their objections to the 1975-76 budget which was made a part of the report.

No objections were received by March 31, 1975, and the budget became final. Invoices for each party's proportionate share of the budget were mailed on April 1 and all payments were made before May 1, 1975. Table 16 presents the 1975-76 budget as approved by the Advisory Board on February 10, 1975. Each Party's share of the 1975-76 budget is shown in Table 17.

WATER USE LICENSE AGREEMENT

FOREST LAWN COMPANY (Licensor) grants to CITY OF BURBANK (Licensee):

A license to extract 800 acre-feet of Licensor's restricted pumping allocated to Licensor (or predecessors in interest) under and pursuant to Judgment dated March 14, 1968, and entered in Los Angeles County Superior Court Case No. 650,079 entitled "The City of Los Angeles, Pleintiff, vs. City of San Fernando, et al., Defendants", during the period commencing as of the date hereof, and continuing to and including September 30, 1975.

Said License is granted, subject to the following conditions:

(1) Licensee shall exercise said right and extract the same on behalf of Forest Lawn Company during the period above specified and put the same to beneficial use and Licensee shall not by the exercise hereunder of said right acquire any right to extract water independent of the rights of Licensor.

(2) Licensee shall notify the Watermaster that said pumping was done pursuant to this License and provide the Watermaster with a copy of the document.

(3) Licensee shall note, in any recording of water production for the period of agreement, that said pumping was done pursuant to this License.

FOREST LAWN COMPANY warrants that it has 800 acre-feet of Restricted Pumping and that it has not pumped and will not pump or permit or license any other person to pump any part of said 800 acre-feet during period from date hereof through September 30, 1975.

FOREST LAWN COMPANY agrees that it will pay the secured value tax on water extracted pursuant to this Agreement.

GRANT DEED and ASSIGNMENT

RIVERWOOD RANCH MUTUAL WATER COMPANY, a corporation, grants to THE CITY OF LOS ANGELES, a municipal corporation, the real property in the County of Los Angeles, State of California, described as:

SECTION A

PARCEL 1: A plot of ground around the pump and well of the Riverwood Ranch Mutual Water Company and the necessary appurtenances thereto, being within:

That portion of Lot 1 of the West Portion of Tujunga Ranch, in the City of Los Angeles, County of Los Angeles, State of California, as shown on a map recorded in Book 28, Pages 51 and 52 of Miscellaneous Records in the office of the County Recorder of said county, described as follows:

Beginning at the southeasterly corner of the existing fence around the pump house which is 11.00 feet easterly and 10.5 feet southerly of the center of the well; thence northerly parallel to the easterly side of pump house 23.00 feet; thence at right angles westerly 20.00 feet; thence at right angles southerly 23.00 feet; thence at right angles easterly 20.00 feet to the point of beginning.

PARCEL 2 An easement for ingress and egress and for utilities over a roadway existing or future, of the width or not less than 20 feet throughout its length, from any roadway in the Riverwood Ranch area wherein ingress and egress is not restricted to the Riverwood Ranch Mutual Water Company or to any roadway in a street dedicated to the said City of Los Angeles.

PARCEL 3. A perpetual right to maintain embankments, bulkheads, diversion dams, drains, ditches, streams and storage ponds within that portion of said Lot 1 belonging to the grantor herein, his heirs and assigns, provided the plan of such embankments, bulkheads, diversion dams, drains, ditches, streams and storage ponds is agreeable to all parties concerned.

SECTION B

All physical property of the Riverwood Ranch Mutual Water Company (including construction work in progress) used or useful in the case of construction work in progress, potentially useful in rendering water service to customers within the area shown on drawing titled Schedule A-1, marked Exhibit "A", attached hereto and made a part hereof and by reference incorporated herein, itemized as follows:

ITEMS OF PROPERTY	QUANTITY
Footage of Main 4" in diameter	4,150
Footage of mains less than 4" in diameter	2,850
Service Connections	37
Meters	38
Fire Hydrants	8
Wells	1
Units of Pumping Equipment	1
Steel Tank	1

Schedule A-1

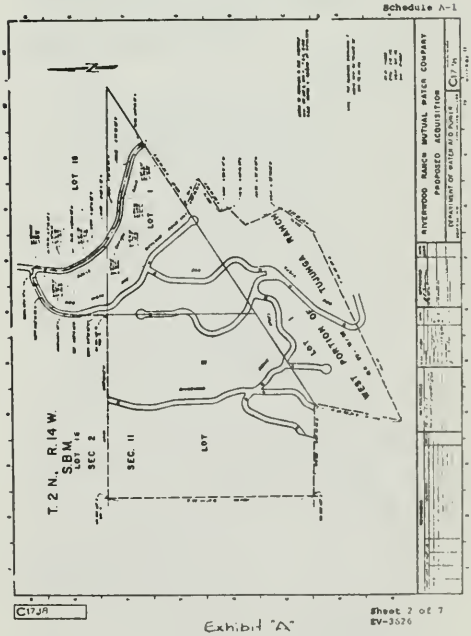

Exhibit "A"

Sheet 2 of 7
EV-3626

MAPS AND RECORDS TO BE DELIVERED TO THE DEPARTMENT

All of the following records in possession of the Company and which pertain to the property to be transferred to the Department within the System area identified in Schedule A-1 shall be delivered to the Department at the time the property is transferred, except as otherwise stated herein:

1. Operating Records
   Pumping records and all other records pertaining to the well.
2. Engineering Records
   All drawing pertaining to installation of mains, services, and hydrants for this System.
1. Land Records
   All documents and records pertaining to lands, easements, and rights of way which are identified in Schedule A-3.
4. Billing Department Records
   Records pertaining to the billing of customers.

WATER LICENSE AGREEMENT

FOREST LAWN COMPANY (Licensor) grants to SOUTHERN SERVICE COMPANY, LTD. (Licensee): a license to extract 45 acre-feet of Licensor's Restricted Pumping allocated to Licensor (predecessors in interest) under and pursuant to Judgment dated March 14, 1968, and entered in Los Angeles Superior Court Case No. 650,079 entitled "The City of Los Angeles, Plaintiff vs. City of San Fernando, et al., Defendants", during the period commencing October 1, 1974, and continuing to and including September 30, 1975.

Said license is granted, subject to the following conditions:

(1) Licensee shall exercise said right and extract the same on behalf of Forest Lawn Company during the period above specified and put the same to beneficial use and Licensee shall not by the exercise hereunder of said rights acquire any right to extract water independent of the rights of Licensor.

(2) Licensee shall notify the Watermaster that said pumping was done pursuant to this License and provide the Watermaster with a copy of the document.

(3) Licensee shall note, in any recording of water production of the period of agreement, that said pumping was done pursuant to this License.

(4) The above described judgment is now on appeal by the City of Los Angeles and the rights herein granted are dependent on said appeal being unsuccessful; and this license shall be terminated automatically without liability to Licensor if said appeal is successful.

FOREST LAWN COMPANY warrants that it has 45 acre-feet of Restricted Pumping and that it has not pumped and will not pump or permit or license any other person to pump any part of said 45 acre-feet during period of October 1, 1974, through September 30, 1975.

PARCEL 1:

Lots 2, 3, 4, and 5 in section 25, Township 3 North, Range 15 West, San Bernardino Meridian, in the County of Los Angeles, State of California, according to the official Plat of said land filed in the district land office of February 9, 1882.

Also the Southwest quarter of the Southeast quarter of said Section 25.

EXCEPTING therefrom that portion of said land included within the lines of land conveyed to said County of Los Angeles, for public road and highway purposes to be known as Pacoima Canyon Road, by deed recorded in Book 5736 Page 47 of deeds, records of said County.

Also excepting from said Parcel 1, that portion of said land described in the deed to Edward F. Gill and Wife, recorded on December 26, 1951 as Instrument No. 60, in Book 37917 Page 15, Official Records of said County.

Also excepting from said Parcel 1, those portions of Lots 2 and 3 in said Section 25 described as follows:

Beginning at a point in the Easterly line of Rancho Ex-Mission De San Fernando, as per map recorded in Book 37 Pages 5 Et Seqs., of Miscellaneous Records, in the office of the County Recorder of said County, distant South 17 Degrees 12 minutes 30 seconds West 374.23 feet from a County Surveyor's 2 inch iron pipe and cap marked S. F. #12, thence along said line South 17 degrees 12 minutes 30 seconds West 554.4 feet, thence North 76 degrees 01 minutes 20 seconds East 123 Feet; thence North 69 degrees 28 minutes 20 seconds East 35.3 Feet; thence North 63 degrees 48 minutes 30 seconds East 65.5 Feet, thence North 65 degrees 31 minutes 30 seconds East 87.2 Feet; thence North 79 degrees 07 minutes 50 seconds East 66.1 feet, thence North 84 degrees 11 minutes 50 seconds East 217.57 feet, thence North 58 degrees 29 minutes 50 seconds East 175 feet; thence North 55 degrees 38 minutes 50 seconds East 102.91 feet, more or less, to a point in the Westerly line of Pacoima Canyon Road, 40 feet wide, thence North 1 degrees 24 minutes 2 seconds East along said line 26.52 feet to the beginning of a tangent curve concave to the West and having a radius of 400 feet and a total central angle of 24 degrees 39 minutes, thence Northerly along the arc of said curve 50.61 feet; thence North 89 degrees 08 minutes West 231.85 feet, thence South 71 degrees 31 minutes West 248.45 feet, thence North 87 degrees 44 minutes West 131.56 feet, thence North 39 degrees 16 minutes 30 seconds West 137.45 feet; thence South 44 degrees 37 minutes West 175.30 feet more or less, to the point of beginning.

Also except from said Parcel 1 that portion of the Southwest quarter of the Southeast Quarter of section 25, Township 3 North, Range 15 West described as follows

Beginning at a point on the Easterly Boundary of said Southwest quarter, distant thereon North 01 degrees 03 minutes 34 seconds East 642.89 feet from the Southeast Corner of said Southwest quarter; thence, along the boundaries of said Southwest quarter, South 01 degrees 03 minutes 34 seconds West 642.89 feet to said Southeast corner; thence, along the Southerly boundary of said Southwest quarter, South 89 degrees 42 minutes 02 seconds West 843.04 feet to a point; thence, leaving said boundaries, North 09 degrees 07 minutes 44 seconds East 157.03 feet; thence, North 03 degrees 12 minutes 07 seconds West 110.00 feet; thence, North 09 degrees 02 minutes 32 seconds East 71.00 feet, thence, North 27 degrees 51 minutes 04 seconds East 55.00 feet; thence North 81 degrees 35 minutes 56 seconds West 168.09 feet, thence South 10 degrees 47 minutes 54 seconds East 371.00 feet; thence South 88 degrees 17 minutes 10 seconds East 169.00 feet; thence South 33 degrees 45 minutes 21 seconds East 133.00 feet, thence South 09 degrees 18 minutes 30 seconds East 122.00 feet; thence North 84 degrees 44 minutes 22 seconds East 183.00 feet; thence North 08 degrees 55 minutes 15 seconds East 66.00 feet, thence North 68 degrees 42 minutes 32 seconds East 165.00 feet; thence North 37 degrees 08 minutes 48 seconds East 48.82 feet; thence South 76 degrees 13 minutes 32 seconds East 286.73 feet to the point of beginning.

PARCEL 2

Those portions of Blocks 4 and 10 and Harding Avenue, lying Between said blocks, in the Hacley Rancho Ex-Mission De San Fernando, in the City of Los Angeles, in the County of Los Angeles, State of California, as per map recorded in Book 37 Pages 5 to 16 of Miscellaneous Records, in the office of the County Recorder of said County, described as a whole as follows.

Beginning at a point in the Easterly line of said Hacley Rancho, distant along said line North 17 degrees 12 minutes East 370.23 feet from the South line of [illegible] 75, Township 3 North, Range 15 West, San Bernardino Meridian; thence [illegible] 177.37 feet along a tangent curve concave Westerly having a radius of [illegible] feet, thence tangent to said curve North 2 degrees 24 minutes [illegible] 153.74 feet to the beginning of a tangent curve concave Easterly, having a radius of 486 feet, thence Northerly along said curve 157.56 feet, thence tangent to said curve North 16 degrees 23 minutes 50 seconds East 54.50 feet to the beginning of a tangent curve concave Westerly having a radius of 420 feet, thence Northerly along said curve 157.70 feet; thence tangent to said curve North 5 degrees 58 minutes 45 seconds West 108.61 feet to the beginning of a tangent curve concave Southeasterly, having a radius of 167.00 feet, thence Northeasterly along said curve 295.10 feet; thence along a radial line of said curve North 70 degrees 11 minutes 25 seconds West 60 feet, thence North 19 degrees 48 minutes 20 seconds East 436.03 feet; thence North 14 degrees 13 minutes 40 seconds East 277.8 feet; thence North 26 degrees 01 minutes 30 seconds East 420.4 feet; thence North 7 degrees 01 minutes 30 seconds East 276.5 feet, thence North 7 degrees 53 minutes 20 seconds East 69.5 feet thence north 12 degrees 11 minutes 20 seconds East 289.6 feet; thence North 19 degrees 03 minutes 40 seconds East 394.1 feet; thence North 27 degrees 23 minutes 20 seconds East 480.8 feet; thence North 46 degrees 07 minutes 30 seconds East 113.7 feet to a point in the East line of said Hacley Rancho distant South 17 degrees 12 minutes West 308.18 feet from the angle point in said East line known as S. P. # 12, thence along said East line South 17 degrees 12 minutes West 4039.16 feet to the point of beginning.

EXCEPTING from said Parcel 2, that portion of said land described in the deed to Edward P. Gill and Wife, recorded on December 26, 1951 as instrument No. 60 in Book 37917 Page 15, Official Records of said County.

Also excepting from said Parcel 2, any portion of said land described in the declaration of taking in case No. 16779-PH U. S. D. C. Southern District of California, Central Division, a certified copy of said declaration being recorded on May 18, 1956, as Instrument No. 2637 in book 44603 Page 186, Official Records of said County.

PARCEL 3.

Those portions of Block 4 and 10 of the Hacley Rancho Ex-Mission of San Fernando, in the City of Los Angeles, in the County of Los Angeles, State of California, as per map recorded in Book 37 Page 5 Et. Seq. of Miscellaneous Records, in the office of the County Recorder of said County and of adjoining Streets and Avenues, partly vacated as shown on the map recorded in Book 107 Pages 24 and 25 of said Miscellaneous records, described as a whole as follows.

Beginning at a point in the Southwesterly line of the 63.60 acre parcel of land described in the deed to Kiener Corporation, recorded in Book 17636, Page 220, Official records of said County, distant Southeasterly along said Southwesterly line 40' feet from the center line of Gridley Avenue (formerly Pacoima Avenue) 60 feet wide, now vacated; thence from said point of beginning South 4 degrees 52 minutes West 690 feet, thence South 13 degrees 09 minutes 07 seconds West 1295.06 feet, thence South 17 degrees 49 minutes West 740 feet, more or less, to the center line of Eldredge Street (formerly 12th Street) 60 feet wide, thence along said center line South 41 degrees 10 minutes 25 seconds East 616.43 feet, more or less, to the center line of Hacley Street; thence along the center line of Hacley Street North 48 degrees 47 minutes 35 seconds East 1278.29 feet, more or less, to the Easterly line of said Hacley Rancho: thence Northerly along said Easterly line to the most Southerly corner of the land described in the deed to Kiener Corporation, recorded in Book 13486 Page 227 of said Official Records, thence Northerly along the various courses of said Easterly line to the Southeasterly line of said 63.60 acre parcel of land, thence along said Southeasterly line South 68 degrees 42 minutes 25 seconds West 1282.79 feet, more or less, to the most Southerly corner of said 63.60 acre parcel, thence along the Southwesterly line of said 63.60 acre Parcel North 21 degrees 07 minutes 45 seconds West 912.75 feet, more or less to the point of beginning.

EXCEPTING from said Parcel 3, that portion of said land described in the declaration of taking in case No. 16779-PH U.S.D.C. Southern District of California, Central division, a certified copy of said declaration being recorded on May 18, 1956 as Instrument No. 2637 in Book 44603 Page 186, Official Records of said County.

PARCEL 4

Those portions of Block 4 of Hacley Rancho Ex-Mission of San Fernando, in the City of Los Angeles, in the County of Los Angeles, State of California, as per map recorded in Book 37 Pages 5 of Miscellaneous records, in the office of the County Recorder of said County and of the vacated Avenues adjoining said Block 4, included in a parcel of land containing exactly 63.60 acres of land the said parcel being of said Parcel of land, being the center line of Gridley Avenue (formerly Parcel 2 Avenue), the Easterly line being described as follows

Beginning at the intersection of said center line of Gridley Avenue with the Northeasterly line of said Block 4, thence Southeasterly and Southwesterly to and along the boundary of said Block 4, to the most Northerly corner of the land described in deed to Kiener Corporation, recorded January 16, 1939, as Instrument No. 739, in Book 13586 Page 227, Official Records of said County, thence Southeasterly along the Northeasterly lines of the land described in said deed to a point in the center line of Harding Avenue, vacated, the Southeasterly line of said 63.60 acre parcel of land being said center line of Harding Avenue, and the Southwesterly line of said 63.60 acre parcel of land being a line praliel with the Southwesterly line of said Block 4.

EXCEPT from said Parcel 4, that portion of said land described in the deed to Edward P. Gill and Wife, recorded on December 26, 1951, as instrument No. 60 in Book 37917, Page 15, Official Records of said County

PARCEL 5:

The West half of the Southeast quarter of section 24, Township 3 North, Range 15 West, San Bernardino Meridain, in the County of Los Angeles, State of California, according to the official Plat of said land filed in the district land office on February 9, 1882.

PARCEL 6:

Those portions of Lots 2 and 3, section 25, Township 3 North, Range 15 West in the County of Los Angeles, State of California, according to the official plat of said land filed in the district land office on February 9, 1882, described as follows:

Beginning at a point in the Easterly line of the Hacley Rancho Ex-Mission De San Fernando, as per map recorded in Book 37 Pages 5 Et Seq. of Miscellaneous Records in the Office of the County Recorder of said County, distant South 17 degrees 12 minutes 30 seconds West 324.23 feet from a County Surveyor's 2 inch iron pipe and cap marked S. P. #12; thence along said line South 17 degrees 12 minutes 30 seconds West 554.4 feet; thence North 76 degrees 01 minutes 30 seconds East 123 feet, thence North 69 degrees 28 minutes 20 seconds East 35.3 feet; thence North 69 degrees 48 minutes 50 seconds East 65.5 feet, thence North 68 degrees 31 minutes 50 seconds East 82.2 feet; thence North 79 degrees 07 minutes 30 seconds East 66.1 feet; thence North 69 degrees 11 minutes 50 seconds East 217.57 feet; thence North 60 degrees 29 minutes 30 seconds East 175 feet; thence North 55 degrees 38 minutes 30 seconds East 302.81 feet,more or less, to a point in the Westerly line of Pacoima Canyon Road 40 feet wide; thence North 1 degrees 24 minutes 20 seconds East along said line 249.50 feet to the beginning of a tangent curve concave to the West and having a radius of 480 feet and a total central angle of 24 degrees 59 seconds; thence Northerly along the arc of said curve 50.61 feet; thence North 89 degrees 08 minutes West 233.85 feet; thence South 71 degrees 31 minutes West 248.45 feet; thence North 87 degrees 44 minutes West 111.56 feet; thence North 59 degrees 16 minutes 30 seconds West 137.45 feet; thence South 44 degrees 37 minutes West 175.30 feet, more or less, to the point of beginning.

EXCEPT from said parcels 1 to 6 inclusive, all oil, gas minerals and other hydrocarbon substances lying in and under said land without, however, the right to enter upon the surface of said land, or the top 500 feet of the subsurface thereof, as quitclained to Raven Construction Company, Inc., a Corporation, as to an undivided 49.9 per cent interest by deed recorded August 12, 1965 as instrument No. 812 in Book D-3013 Page 30 official Records, and Quitclained to Greenwood Sales Co., a Corporation, as to an undivided 50.1 per cent interest by deed recorded August 12, 1965 as instrument No. 813 in Book D-3013 Page 88, Official Records.

SUGGESTED SAMPLES OF DOCUMENTS FOR TRANSFERRING WATER RIGHTS

YEARLY ASSIGNMENTS

WATER USE LICENSE AGREEMENT

JOHN DOE hereby grants to BILL SMITH: a licensee to extract _____ acre-feet of licensor's Restricted Pumping allocated to licensor (or predecessors in interest) under and pursuant to Judgment dated March 14, 1968, and entered in Los Angeles Superior Court Case No. 650,079 entitled "The City of Los Angeles, Plaintiff vs. City of San Fernando, et al., Defendants", during the period commencing October 1, 19__ and continuing to and including September 30, 19__.

Said License is granted, subject to the following conditions:

(1) Licensee shall exercise said right and extract the same on behalf of JOHN DOE during the period above specified and put the same to beneficial use and licensee shall not by the exercise hereunder of said right acquire any right to extract water independent of the rights of licensor.

(2) Licensee shall notify the Watermaster that said pumping was done pursuant to this license and provide the Watermaster with a copy of the document.

(3) Licensee shall note, in any recording of water production for the period of agreement, that said pumping was done pursuant to this license.

JOHN DOE warrants that he has _____ acre-feet of Restricted Pumping and that he has not pumped and will not pump or permit or license any other person to pump any part of said _____ acre-feet during period of October 1, 19__ through September 30, 19__.
